Education

Dayananda Sagar Academy of Technology and Management 09/2023 - 06/2027
Bachelor of Technology, Information Science *CGPA: 9.0*

Sri Chaitanya Techno School 2023
Class XII (CBSE) *79.4%*

Dayananda Sagar International School 2021
Class X (ICSE) *90.6%*

Skills

Programming: Java, Python, C, C++, Bash, SQL
Libraries/Frameworks: Node.js, React.js
Tools/Platforms: Git, Github, Linux, AWS, Docker, GitLab CI/CD, GitHub Actions
Databases: Oracle, SQLite, MongoDB
Strong Subjects: DSA, DBMS, OOP, Operating Systems, Computer Networks

Projects / Open-Source

Smart Campus Service Desk System – Link

- Java, Spring Boot, Spring MVC, MySQL, Thymeleaf, REST APIs
- Developed a full-stack campus ticket management platform enabling students to raise, track, and manage service requests through a role-based workflow system.
- Built RESTful APIs and CRUD modules using Spring Boot, Spring Data JPA, and MySQL for ticket assignment, status tracking, authentication, and department management.
- Designed responsive MVC-based user interfaces with Thymeleaf, HTML5, CSS3, and Bootstrap while implementing validation, exception handling, and secure authentication using Spring Security.

InternHunt – Link

- Amplify, MongoDB, Supabase, Node.js, Spacy
- Developed an AI-integrated internship management system with RBAC for teachers, students, and admins, increasing placement notifications by 50%.
- Implemented a resume scanning system that matches student profiles with teacher/admin job postings and notifies students about aligned opportunities, reducing manual review time by up to 50%.
- Conducted load testing with Locust for 500+ concurrent users, ensuring stable performance.

AdShield – Link

- Puppeteer, MongoDB
- Developed a system to detect malicious ads on social media, achieving 90% detection accuracy.
- Collected ads via APIs, Puppeteer web scraping, and browser extensions, providing structured analytics.
- Designed a scalable web scraping pipeline using Puppeteer to collect and process large-scale ad data, improving data coverage and reliability for detection.

SkyConnect – Link

- Pandas, Matplotlib, Seaborn, GeoPandas
- Processed and analyzed flight route datasets using Python, Pandas, and GeoPandas to evaluate airline competition, flight frequency, and market trends.
- Created visualizations for flight shares and ticket cost estimates, improving clarity of route analysis by 50%.

Achievements

- Secured 2nd place among 250+ teams in UDAYA 1.0 Intra-DSI Hackathon for developing an AI-powered platform enabling deaf and mute students to access real-time classroom learning through sign-language translation and multilingual educational support.
- Solved 150+ DSA problems across LeetCode and GFG covering core data structures and algorithms.
